

47 - YASHI SARANG

Cacao seeds are

Q1. collected from cacao trees

Fermented to remove

Q2. bitterness and give flavour

Beans are

Q3. dried

Roasted

Q4. cleaned

Q5. Shell is removed

to get a cacao

Q6. rib

Cacao ribs are ground

to get cacao fat mass

Mixed with ~~the~~ milk solids,

Q8. sugar & Q9. emulsifiers

Q10. Commercial chocolate

# Fluctuation of population of 3 wildlife species in NA.

According to the Wildlife Population data, in the span of 5 years from 2011 to 2016, 3 wildlife species and their numbers were monitored.

At the start of 2011, the number of Dolphins was expected to be at around 150 thousand, Whales ~~Bears~~ were around 70-80 thousand and Bears were around just a few thousands. But, by the end of 2016 we observed that the numbers of Dolphins fell drastically almost nearing to zero, whereas the number of Bears increased drastically reaching almost 180 thousand. The numbers of Whales ~~remained~~ remained constant though.

These changes in the number were due to the unequal distribution in the Federal spending on species protection. Out of the total budget, only 5% of the funds were allotted to the protection of Dolphins and 65% was allotted to Bears. The increase and decrease are directly ~~not proportional~~ proportional to the amount of funds allotted.

Hence, Whales had a constant ~~and~~ number past few years due to balanced 30% allotment of funds.
